

**1962
INVENTORY**

Municipal Waste Facilities

REGION IX

Alaska
Arizona
California
Hawaii
Nevada
Oregon
Washington

U. S. DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE
Public Health Service
Division of Water Supply and Pollution Control
Basic Data Branch
Washington, D. C.

For administrative purposes, the U. S. Department of Health, Education, and Welfare divides the States of the Nation into nine regional groupings. The 1962 INVENTORY OF MUNICIPAL WASTE FACILITIES is published in nine volumes--one for each region as shown below:

- Region I - PHS Publication No. 1065 - Volume 1
Connecticut, Maine, Massachusetts, New Hampshire,
Rhode Island, Vermont
- Region II - PHS Publication No. 1065 - Volume 2
Delaware, New Jersey, New York, Pennsylvania
- Region III - PHS Publication No. 1065 - Volume 3
District of Columbia, Kentucky, Maryland,
North Carolina, Virginia, West Virginia, Puerto Rico
- Region IV - PHS Publication No. 1065 - Volume 4
Alabama, Florida, Georgia, Mississippi, South Carolina,
Tennessee
- Region V - PHS Publication No. 1065 - Volume 5
Illinois, Indiana, Michigan, Ohio, Wisconsin
- Region VI - PHS Publication No. 1065 - Volume 6
Iowa, Kansas, Minnesota, Missouri, Nebraska,
North Dakota, South Dakota
- Region VII - PHS Publication No. 1065 - Volume 7
Arkansas, Louisiana, New Mexico, Oklahoma, Texas
- Region VIII - PHS Publication No. 1065 - Volume 8
Colorado, Idaho, Montana, Utah, Wyoming
- Region IX - PHS Publication No. 1065 - Volume 9
Alaska, Arizona, California, Hawaii, Nevada, Oregon,
Washington

Public Health Service Publication No. 1065

Volume 9

Washington, D.C., 20402 - Price 75 cents

FOREWORD

Clean water in sufficient quantity when and where it is needed has become a cry of the 1960's. Water has always been basic to man's survival -- and it is essential to his economic and social well-being. But never has this Nation required so much water for homes, factories, farms and recreation as it does today. Nor have the discarded wastes of cities, industry and agriculture ever posed such enormous threats to our water resource as they do today.

Development of the water resource presently involves an expenditure of about \$10 billion a year in this country. Water pollution control has high priority in this development. New municipal and industrial waste treatment works over the next 20 years have been priced out at \$42 billion. Both Congress and State Legislatures have enacted laws and there are both Federal and State programs, working very closely together, to protect the quality of the Nation's water resources.

We could ill afford to expend such great sums and effort for water pollution prevention and abatement without accurate bookkeeping on accomplishments and further needs. For many years the Public Health Service has collected, analyzed and published data on municipal sewage disposal systems and waste treatment facilities. The last such publication was in 1958 covering 1957 data. It contained, in addition to the municipal data, limited information on industrial waste treatment facilities (PHS Publication No. 622).

This newest report contains data on only the municipal waste treatment facilities as of January 1, 1962. Grateful acknowledgment is made to the individual State agencies who assisted in the inventory, and which are named at the beginning of each State listing.

G. E. McCALLUM

NOTES REGARDING TABULATIONS

GENERAL

This Inventory contains the latest available data for all sources of municipal pollution which are of significance in water pollution control programs.

Each individual item listed in column 1 is defined as an "entry".

In the listings, each non-community entry is referred to the nearest community, whenever possible. Entries appear in alphabetical order according to community. Entries listed under the same community are alphabetized by name, under that community.

When requested by the cooperating agency, entries for institutions, schools, shopping centers, motels, etc., are listed alphabetically after the last municipal entry.

Following each State listing is a table showing those sewage disposal facilities which serve more than one of the entries, together with the names of all entries which are served by the particular facility.

An "x" in the listings indicates that the data called for are not available. A dash "-" signifies that the data called for do not apply to the entry. An asterisk "*" indicates that a "Remark" is entered in column 15.

COLUMN (1) COMMUNITY, SEWER OR SANITARY DISTRICT OR INSTITUTION

Entries marked with a star "*" are disposal facilities which serve one or more additional entries.

The following abbreviations are used.

Auth.	--Authority
Co.	--County
Col.	--College
Comm.	--Commission
D. or Dist.	--District
D. R.	--Dude Ranch

Est.	--Estate
Fed. Hous. Proj.	--Federal Housing Project
F. H. A.	--Federal Housing Administration
Hosp.	--Hospital
Hts.	--Heights
Ind. Res.	--Indian Reservation
Inst.	--Institute, Institution
Jct.	--Junction
Mon.	--Monument
M. U. D.	--Municipal Utility District
M. V.	--Mill Village
Nat.	--National
Penit.	--Penitentiary
P.C.	--Permanent Camp (Recreation, Forest, or other)
Pk.	--Park
P. H. A. or F. P. H. A.	--Public Housing Administration
P. U. D.	--Public Utility District
San.	--Sanatorium, Sanitarium
Sch.	--School
S. D.	--Sanitary, Sanitation or Sewer District
Sec.	--Section
S. M. D.	--Sewer Maintenance District
Sta.	--Station
(T), To., Twp.	--Town or Township
Univ.	--University

COLUMN (2) COUNTY NAME

The name of the county in which the community, facility or institution is located.

COLUMN (3) 1960 CENSUS POPULATION

For communities, the entry shows the 1960 population, as reported by the U.S. Bureau of the Census, or taken from the 1961 edition of the Rand McNally Atlas. For institutions and others, the figure is the same as population served.

COLUMN (4) ESTIMATED POPULATION SERVED

The figure appearing indicates the estimated total number of people served by the facilities. A figure shown in parentheses indicates that the entry is served by the facilities of another entry (the latter being indicated in column 8). The population shown in parentheses is included in that listed under the serving entry.

COLUMN (5) TYPE SEWER SYSTEM

The type sewer system is coded as follows:

- S - Separate (designed to carry domestic sewage and industrial waste separately from storm water runoff)
- C - Combined (designed to carry domestic sewage, industrial waste, and storm water runoff in the same sewer)

COLUMN (6) AVERAGE DAILY FLOW (MGD)

The actual waste flow for the entry.

An "E" following the flow figure indicates that the flow has been estimated.

COLUMN (7) DESIGNED FOR

Top-line Entry - Average Daily Flow (MGD) - The flow for which the facilities were designed.

Bottom-line Entry - PE (1,000's) - The population equivalent, in thousands, as measured by BOD, for which the facilities were designed.

COLUMN (8) TREATMENT

The principal treatment devices and methods are identified by capitalized letters and are further described by subsequent lower case letters.

In general, the symbols are arranged in the order of sewage flow with sludge treatment symbols following thereafter. Combination units performing more than one function in a single structure are denoted by enclosing the appropriate symbols in parentheses. Enclosures in brackets indicate parallel or alternate operation. Chlorination, where used, is usually noted only once for each plant regardless of whether actual application is made at more than one point.

See Appendix A for code.

COLUMN (9) SAME AS COLUMN (1)

COLUMN (10) MAJOR AND MINOR DRAINAGE BASIN

Top-line Entries - The major drainage basin in which the entry is located. See Appendix B for code.

Bottom-line Entries - The minor drainage basin in which the entry is located. See Appendix B for code.

COLUMN (10A) SUB-BASIN

The sub-basin in which the entry is located. Not all States have delineated sub-basin limits.

COLUMN (11) WATERCOURSE MILEAGE

For entries discharging either raw or treated sewage into a river system, watercourse mileages are entered in accordance with the coding system shown in Appendix C.

The column does not apply to entries discharging onto land or into lakes or an ocean. When data appear in this column for such entries, the only purpose is to locate the entry.

COLUMN (12) DISCHARGE TO

The watercourse or land area to which the untreated wastes or treatment plant effluent is discharged.

The following abbreviations are used.

Ar.	-Arroyo
Br.	-Branch, Brook

- 1. -Canal
- 2. -Creek
- 3. -East
- 4. -Fork
- 5. -Lake
- 6. -Land
- 7. -Little
- 8. -North
- 9. -Pond
- 10. -River
- 11. -South
- 12. -Stream
- 13. -Tributary
- 14. -West
- 15. -Wash

13) POPULATION EQUIVALENT (BOD)

Entries - The Population Equivalent of the untreated waste is the top line, and followed by estimated.

Entries - The Population (BOD) of the treated waste, as to the receiving area, is entered bottom line. If estimated, an 'ed'.

When waste discharge is not into of water, but is rather onto land lagoons from which there is no flow, the bottom line entry in this may be shown in one of two

States enter a figure showing the (BOD) of the wastes as they are discharged into these land areas or lagoons. States enter an "O" to indicate waste reaches a watercourse. In cases exactly the same situation physically, only the method of treating it differs.

14) POLLUTION ABATEMENT NEEDS

Explanatory Notes

1. This symbol indicates the need for a new plant

1 Enlargement of existing facilities

2 Addition of other treatment methods to existing facilities

3 Chlorination

4 Replacement of existing plant

when a "None" appears in column 8.

This symbol indicates a need for enlargement of the existing treatment plant shown in column 8. For example, addition of another filter to a trickling filter plant.

When this symbol is used it indicates that the degree of treatment or the type of pollution control measures in use are considered to be adequate.

This symbol indicates a need for addition of other treatment methods to the treatment plant shown in column 8. For example, the addition of trickling filters to a primary treatment plant.

When this symbol is used the degree of treatment or the type of pollution control measures in use are not considered to be adequate without supplementation.

This is a specific requirement coming under symbol "2" above. It may be used either in conjunction with that symbol (as when chlorination plus other additions are needed), or in place of it (as when chlorination only is needed).

This symbol indicates a need for replacement of the existing treatment plant shown in column 8.

Symbol
4 (contd.)

Explanatory Notes

"Replacement" means that the plant or pollution control measures replaced will no longer be used. It is possible that this replacement may be by a plant or by pollution control measures providing the same degree of treatment as those which are replaced. This symbol provides for recognition of the fact that pollution reduction has been provided for, but that due to obsolescence, or for any other reason, the existing facilities are no longer capable of producing satisfactory results.

- 5 Improved operation or utilization of existing facilities
- 6 Connection to adequate existing sewer system
- 7 No project needed

COLUMN (15) REMARKS

Any pertinent remarks relating to the entry appear in this column.

APPENDIX A

TREATMENT CODE

The principal treatment devices and methods are identified by capital letters and are further described by subsequent lower case letters. In general, the sym-

bols will be arranged in the order of sewage flow, with sludge treatment symbols following thereafter. Combination units performing more than one function in a single structure are denoted by enclosing the appropriate symbols in parentheses. Enclosures in brackets indicate parallel or alternate operation. Chlorination, where used is noted only once for each plant, regardless whether or not actual application is made at more than one point.

KEY TO SYMBOLS

- A -----Aeration
 - Aa---Activated sludge, diffused air aeration
 - Ac---Contact aerators
 - Ae---Extended Aeration
 - Am---Activated sludge, mechanical aeration
 - Ap---Aeration, plain, without sludge return
- B -----Sludge beds
 - Bo---Open
 - Bc---Glass covered
- C -----Settling tanks
 - Ci---two story (Imhoff)
 - Cm---mechanically equipped
 - Cp---plain, hopper bottom or intermittently drained for cleaning
 - Cs---septic tank
 - Ct---multiple tray, mechanically equipped
- D -----Digester, separate sludge
 - Dc---with cover (fixed if not otherwise specified)
 - D(cg)-gasometer in fixed cover
 - De---gas used in engines (heat usually recovered)
 - Df---with floating cover
 - Dg---with gasometer cover
 - Dh---gas used in heating
 - Dm---stirring mechanism
 - Do---open top
 - Dp---unheated
 - Dr---heated
 - Ds---gas storage in separate holder
 - Dt---stage digestion
- E -----Chlorination
 - Ec---with contact tank

APPENDIX A (cont'd.)

Eg---by chlorine gas
 Eh---by hypochlorite
 F ----Filters
 Fc---contact beds
 Fm--magnetite (straining)
 Fo---roughing filters
 Fr---rapid sand or other sand straining
 Fs---intermittent sand
 Ft---trickling (no further details)
 Fth--high capacity
 Ftn--fixed nozzle, standard capacity
 Ftr--rotary distributor, standard capacity
 Ftt--traveling distributor, standard capacity
 G ----Grit chambers
 Gh---without continuous removal mechanism
 Gm--with continuous removal mechanism
 Gp---grit pocket at screen chamber
 Gw--separate grit washing device
 H ----Sludge storage tanks (not second stage digestion units)
 Hc---covered
 Hm--with stirring or concentrating mechanism
 Ho---open
 I -----Sewage application to land
 Ic---with cropping
 Ip---percolation beds
 Is---sub-surface application
 Iu---land underdrained
 K ----Chemical treatment - Flocculation.
 Chemical treatment-type units or equipment not necessarily complete or operated as chemical treatment
 Ka---flocculation tank, air agitation
 Kc---chemicals used
 Km--flocculation tank, mechanical agitation
 Kx---no chemicals used
 L ----Lagoons
 Le---evaporation lagoons
 Lo---oxidation lagoons or ponds
 Lp---lagoon for settling of sewage
 Ls---sludge lagoons - not for treatment of sewage
 O ----Grease removal or skimming tanks
 not incidental to settling tanks
 Oa---aerated tank (diffused air)

Om--mechanically equipped tank
 S -----Screens
 Sc---comminutor (screenings ground in sewage stream)
 Si---intermediate screens (1/8" to 1/2" openings)
 Sf---fine screen (less than 1/8" openings)
 Sg---screenings ground in separate grinder and returned to sewage flow
 Sh---bar rack (1/2" to 2" openings) hand cleaned
 Sm--bar rack (1/2" to 2" openings) mechanically cleaned
 Sr---coarse rack (openings over 2")
 St---garbage ground at plant and added to sewage flow
 T ----Sludge thickener
 Tc---covered
 Tm--stirring mechanism
 To---open top
 V ----Mechanical sludge dewatering
 Vc---sludge centrifuge
 Vv---rotary vacuum filter
 Vo---other
 X ----Sludge disposal
 Xb---barged to sea
 Xd---used for fertilizer
 Xf---burned for fuel
 Xn---incinerated
 Xp---used for fill
 Z ----Sludge conditioning
 Za---chemicals used, alum
 Zc---chemicals used (unidentified)
 Zi---chemicals used, iron salt
 Zl---chemicals used, lime
 Zx---no chemicals used
 Zy---elutriation

- 5 Yukon River
- 6 Arctic Ocean
- 7 Noatak-Koabuk Rivers

APPENDIX B (cont'd.)

HA - Hawaii

- 1 Hawaii Island
- 2 Kauai Island
- 3 Maui Island
- 4 Oahu Island

APPENDIX C

The watercourse mileage system is illustrated with reference to the accompanying diagram of the (hypothetical) Nuavo River minor basin.

Shown are the main stem of the minor-basin, together with those tributaries on which sources of pollution are located. Tributaries entering the main stem are located by mileages above the mouth of the main stem. Sub-tributaries are located by mileages above the mouth of the tributary into which they discharge, tertiary tributaries by mileages above the mouth of the sub-tributary into which they discharge, and so on for fourth, fifth, etc., tributaries.

The watercourse mileage coding for each source of pollution on this river system is shown in the following table:

Source of Pollution Watercourse Mileage

A	N5
B	N13-6
C	N10-10
D	N10-18-9
E	N18
F	N22
G	N26-17-6-5
H	N35
I	NR44-23
J	NR44-28
K	NR44-L25-6
L	NR44-R25-6
M	NL44-6
N	N52
P	N59-5
Q	N67

In each code symbol a letter - "N" in this case - appears first to denote the main stem concerned. The letter symbol is followed by numbers which locate by

river mileage the particular source of pollution.

The coding for three sources of pollution from the table is discussed more fully below:

1) Source D Code: N10-18-9
This source of pollution is located on a second tributary, which enters the first tributary 18 miles above its mouth. The first tributary, in turn, enters the main stem 10 miles above its mouth. The coding for "D" is then made up as follows:

N10 Indicates a point 10 miles above the mouth of the main stem

-18 A point 18 miles above the mouth of the first tributary

-9 A point 9 miles above the mouth of the second tributary

APPENDIX C (CONT. A.)

2) Source J Code: NR44-28

Located on a first tributary which enters the main stem 44 miles above its mouth. The coding for "J" is made up as follows:

NR44 A point 44 miles above the mouth of the main stem, on the right bank.

-28 A point 28 miles above the mouth of the first tributary

Note that in the coding for source "J" above, an additional letter - an "R" - appears after the "N" designating the main stem in the first part of the code. This "R" signifies that the tributary carrying pollution from source "J" enters the main stem on the right side, looking upstream. The second letter serves to differentiate this tributary from that entering directly opposite, on the left side of the main stem (see code for source "M"). The designations "R" and "L" are necessary only in situations of this type. The same principle may also be applied to similar conditions on tributaries, always looking upstream to define the right and left banks. This is shown in the next example.

3) Source L Code: NR44-R25-6

Located on a second tributary which enters the first tributary 25 miles above its mouth. The coding for source "L" is made up as follows:

NR44 A point 44 miles above the mouth of the main stem, on the right bank.

-R25 A point 25 miles above the mouth of the first tributary, on the right bank.

-6 A point 6 miles above the mouth of the second tributary.

In this case the "R" designation is necessary in the mileage coding of the first tributary since at this point another second tributary enters on the opposite (left) bank. Note that the coding for source "K" (NR44-L25-6) differs from that for source "L" only by the fact that it is located on a tributary entering on the left bank - looking upstream - of the first tributary.

In those cases where two or more main stems are located in one minor-basin, differentiation is made by the first letter of the code, i.e., the "N" in this case would distinguish sources of pollution on the Nuavo River from those on, say, the Cling River, if the latter was also in this minor-basin.

It may happen that two rivers having the same initial letter lie in the same minor-basin. In this case, a second letter will be used for distinction. Thus if, in addition to the Nuavo, the North River was also a main stem in this minor-basin, the Nuavo could be coded as given i.e., "N" while the North could be coded as "NO".

Major points to be reiterated are:

1) All mileages in the code are river mileages.

2) The zero point for mileages on the main stem is at the mouth of the main stem. The zero point for mileages on a tributary is at the mouth of the tributary.

3) For uniformity, right and left banks of the main stem and tributaries are located by looking upstream on the main stem or tributary concerned.

ALASKA

The data for this State have been collected
with the helpful cooperation of the:

State of Alaska Department of Health and Welfare
Branch of Environmental Health
